

DRAFT * Student Teaching Rubric***DRAFT**

Based on the *Connecticut Common Core of Teaching* (CSDE, 1999)
and *Enhancing Professional Practice: A Framework for Teaching* by Charlotte Danielson (ASCD, 1996)

This rubric was developed during 2003 by a team of educators from Connecticut teacher preparation institutions and PK-12 schools and is based on the Connecticut Common Core of Teaching (CCCT, adopted in 1999) and *Enhancing Professional Practice: A Framework for Teaching* by Charlotte Danielson (ASCD, 1996).

This rubric is specifically developed for the purpose of assessing student teaching performance (not experienced or beginning teacher performance). Each level of performance described (unacceptable, acceptable, and proficient) represents a range within which the student teacher’s performance may be assessed given the data collected about the competency.

This rubric should be used:

- For both formative and summative evaluations of performance.
- In conjunction with comprehensive data collection forms and processes and should be applied based on multiple sources of data (lesson observation, lesson plans, design and assessment of student work, personal and professional interactions with school based personnel, parents and students, etc.). Not all competencies will be observed in any one lesson; when used to assess a single lesson, if there is insufficient data to select a rubric descriptor, the competency should be considered “not evidenced” at that point in time. However, all competencies should be observed or have sufficient data to justify a summative evaluation decision by the end of the student teaching placement.
- In conjunction with the glossary of terms at the end of the rubric which defines particular terminology used within the rubric. Student teachers, cooperating teachers and supervisors should refer to the glossary to ensure accurate understanding of the rubric terms.

This rubric focuses on the following CCCT categories (and competencies underlying each). See glossary of terms on pages 8-10 for definitions of key terms used in this rubric.

II. Teachers apply knowledge by:

Planning:	Teachers plan instruction based upon knowledge of subject matter, students, the curriculum and the community and create a structure for learning by selecting and/or creating significant learning tasks that make subject matter meaningful to students.
Instructing:	Teachers create a positive learning environment, use effective verbal, nonverbal and media communications techniques, and create and facilitate instructional opportunities to support students’ academic, social and personal development.
Assessing and Adjusting:	Teachers use various assessment techniques to evaluate student learning and modify instruction as appropriate.

III. Teachers demonstrate professional responsibility through: Reflection on Continuous Learning, Professional and Ethical Practice, Leadership and Collaboration

Professional and Ethical Practice:	Teachers conduct themselves as professionals in accordance with the Code of Professional Responsibility for Teachers.
Reflection and Continuous Learning:	Teachers continually engage in self-evaluation of the effects of their choices and actions on students and the school community.
Leadership and Collaboration:	Teachers demonstrate a commitment to their students and a passion for improving their profession.

Note: Terms in italics are defined in the glossary.

GLOSSARY OF TERMS

Term	Definition
Accommodation	Provisions made in <i>how</i> a student <i>accesses</i> and <i>demonstrates</i> learning. Accommodations are made in order to provide a student equal access to learning and equal opportunity to demonstrate what is known. Accommodations include <i>extra time, seating, a/v aids, etc.</i>
Alignment	A direct relationship and link between goals, objectives and tasks, or between goals, objectives and tasks and content standards
Application	The student's ability to apply procedural and or <i>conceptual understanding</i> from one task to another, independent of guidance and assistance from teacher.
Closure	Closures assist students in integrating and processing information at the end of the lesson or lesson segments, relate to the lesson objectives and help students understand the purpose of the lesson content. They may be explicit statements or may be instructional activities facilitated by either the teacher and/or by students.
Critical Thinking	Critical thinking is the intellectually disciplined process of actively and skillfully conceptualizing, applying, analyzing, synthesizing, and/or evaluating information gathered from, or generated by, observation, experience, reflection, reasoning, or communication, as a guide to belief and action. In its exemplary form, it is based on universal intellectual values that transcend subject matter divisions: clarity, accuracy, precision, consistency, relevance, sound evidence, good reasons, depth, breadth, and fairness. Critical thinking can be seen as having two components: 1) a set of information and belief generating and processing skills, and 2) the habit, based on intellectual commitment, of using those skills to guide behavior. It is thus to be contrasted with: 1) the mere acquisition and retention of information alone, because it involves a particular way in which information is sought and treated; 2) the mere possession of a set of skills, because it involves the continual use of them; and 3) the mere use of those skills ("as an exercise") without acceptance of their results. (Source: http://www.criticalthinking.org/)
Communication of Expectations	The teacher communicates expectations, academic and/or behavioral, explicitly verbalized or communicated through approach to assigning tasks, rewarding student effort and providing help and encouragement to all students.
Concept-based instruction Conceptual understanding	Concept-based instruction, as described by Lynn Erickson (2001b), stresses higher order thinking skills. Whereas traditional curriculum requires students to "cover" topics, memorize facts, and restate them for evaluation purposes, the concept-based method stresses identifying and thinking through concepts and "big ideas." In this system, the term concept refers to an organizing idea, like perception, culture, or addition. Concepts are timeless, universal, abstract, and broad. They are always represented by one or two nouns, and examples of concepts share common attributes. Concepts are sometimes confused with topics which are often examples of concepts. For instance, <i>the American Revolution</i> is a Social Studies topic, where <i>revolution</i> is a concept that turns up in many content areas. <i>Big ideas</i> , also known as <i>enduring understandings</i> , are generalizations that show the relationships between concepts. (Sources: Erickson, H.L. (2001a). <i>Concept-based curriculum and instruction</i> . Thousand Oaks, CA: Corwin and Erickson, H.L. (2001b). <i>Stirring the head, heart, and soul, second edition</i> . Thousand Oaks, CA: Corwin)
Connections	Activate prior learning and linking to new learning; apply new learning; help students understand how the learning task relates to the math or language arts concept.
Differentiated Instruction	Carol Ann Tomlinson identifies three elements of the curriculum that can be differentiated: Content, Process, and Products. "A differentiated classroom offers a variety of learning options designed to tap into different readiness levels, interests, and learning profiles. In a differentiated class, the teacher uses (1) a variety of ways for students to explore curriculum content, (2) a variety of sense-making activities or processes through which students can come to understand and "own" information and ideas, and (3) a variety of options through which students can demonstrate or exhibit what they have learned." (Source: Tomlinson, C.A. (1995, October). Differentiating instruction for advanced learners in the mixed-ability middle school classroom. <i>Eric EG Digest</i> , #E536. Retrieved March 14, 2002, from http://www.kidsource.com/kidsource/content/diff_instruction.html)

CONNECTICUT STATE DEPARTMENT OF EDUCATION

DRAFT * Student Teaching Rubric*** DRAFT**

Based on the *Connecticut Common Core of Teaching* (CSDE, 1999)
and *Enhancing Professional Practice: A Framework for Teaching* by Charlotte Danielson (ASCD, 1996)

GLOSSARY OF TERMS

Discourse	<p>Communication, oral or written, with focus on developing critical skills such as problem solving, reasoning, making connections within the content or discipline. Discourse is a mode of communication that promotes understanding which occurs between the teacher and students or among the students. Examples of discourse include, but are not limited to, students:</p> <ul style="list-style-type: none"> • Discussing their understanding • Teaching each other a concept or skill • Explaining their reasoning, thinking or problem-solving process • Responding to or evaluating text or information <p>Purposeful interaction between and among teachers and students, in which ideas are represented, communicated and challenged, with the goal of greater meaning or understanding. Discourse can be oral dialogue (conversation), written dialogue (reaction, thought, feedback), or visual dialogue (charts, graphs, paintings, or images) that represent student and teacher thinking /reasoning. (CCCT, CSDE, 1999)</p>
Dispositions	<p>The values, commitments, and professional ethics that influence behaviors toward students, families, colleagues, and communities and affect student learning, motivation, and development as well as the educator’s own professional growth. Dispositions are guided by beliefs and attitudes related to values such as caring, fairness, honesty, responsibility, and social justice. (NCATE, 2000)</p>
Engagement	<p>Engagement refers to “the extent of students’ involvement and active participation in learning activities”.</p> <p>(Source: Cole, P.G. & Chan, L.K.S. (1994) Teaching principles and practice (2nd Edition), New York, Prentice Hall)</p>
Feedback	<p>Constructive information, academic or behavioral, provided to the student about the involvement in/completion of a process or task; oral or written response by a teacher to a student indicating strengths and/or weaknesses with respect to a product or action.</p> <p>Responding to students including responding to student replies, failures to answer, questions and/or comments, build upon student contributions, clarifying, refocusing, acknowledging correct responses, providing corrective feedback, extending or prompting.</p>
Independence vs. working independently	<p>Student independence is related to the ability of the student to complete task without assistance and/or generalize learning to new tasks/settings.</p> <p>Working independently means working alone or individually to complete an assigned task perhaps after guided practice or assistance.</p>
Initiation	<p>Initiations facilitate student understanding, activate prior knowledge or learning and motivate students. They often preview what is to be learned, why and how it relates to past or future learning. They may be explicit statements or may be instructional activities or teacher modeling. Simply stating activities in which the students will be engaged is not sufficient.</p>
Modifications	<p>A substantial change in <i>what</i> a student <i>is expected to learn and to demonstrate</i>. Changes may be made in the instructional level, the content or the performance criteria. Such changes are made to provide a student with meaningful and productive learning experiences, tasks and assessments based on individual needs and abilities. <i>Individualized modifications include revised materials, adjusted assessments, point sheets for behavior, task analysis, etc.</i></p>
Problem Solving	<p>The Problem Solving process consists of a sequence of sections that fit together depending on the type of problem to be solved. These are: Problem Definition; Problem Analysis; Generating possible Solutions; Analyzing the Solutions; Selecting the best Solution(s); Planning the next course of action (Next Steps). The process is a guide for problem solving.</p> <p>(Source: http://www.gdrc.org/, Global Development Research Center)</p>
Rapport	<p>Teacher demonstrates patience, acceptance, empathy, and interest in students through positive verbal and non-verbal exchanges; avoids sarcasm, disparaging remarks, sexist, racial comments, scapegoating and physical abuse. Teacher exhibits own enthusiasm and maintains a positive social and emotional atmosphere in the learning environment.</p>
Reflection	<p>Reflection refers to the ongoing process of critically examining past and current practice to facilitate the development of future action.</p> <p>(Source: Han, E. P. (Summer, 1995). Reflection is essential in teacher education. <i>Childhood Education</i>, 71, 228-230)</p>

GLOSSARY OF TERMS

Routines	Classroom routines are non-instructional, organizational, administrative or repetitive activities such as roll-taking, pencil sharpening, distribution of materials and equipment, lavatory/water fountain procedures, assembling into workgroups, going to lockers, clean-up procedures, collecting assignments, medical/nurse related visits, etc.
Sequence	Logic and order of a sequence of lessons planned or implementation of learning tasks; sequence of curriculum.
Self-monitoring	Monitoring own behavior or performance based on criteria provided by the teacher.
Standards of behavior	Explicit rules and standards that are established and maintained; Clear and consistent expectations for appropriate student behavior. Teacher communicates and reinforces appropriate standards of behavior through statements of rules or responses to student behavior, and applies fitting consequences when appropriate.
Strategy	Learning strategies instruction focuses on how to learn and how to use what has been learned. Strategies for learning include: a general approach to solving a set of problems; promotes goal-directed behavior; teaches selection of appropriate procedures or making the appropriate choices; guides implementation of a procedure; shows how to monitor progress; can be controlled; and provides and focuses on cues for students to take action. <i>(Source: Institute for Learning Disabilities, 1990)</i>
Tasks	Activities, materials and discussions implemented or facilitated during instruction.
Transitions	Transitions are non-instructional organizational or administrative moves from one classroom activity or context to another and may occur between instructional activities such as moving: <ul style="list-style-type: none"> • to/from large/small groups or individual work, desks/lab tables/learning centers, • from inside to outside (or vice versa), or one classroom to another, • to/from another learning activity, seatwork, film, reading session, hands-on activity, etc.
